

Munters Plastic Gutter

Evaporative Cooling

Munters Plastic Gutter (MPG) is a complete water supply and distribution system for wet evaporative cooling pad roofs. An easy-to-install, glue- and adhesive-free solution system.

Glue-free system

- no water leakage from adhesive cracks
- easy installation, cleaning, and pad replacement
- avoid repairs and repairs of full-length cooling system

High quality materials

- no water leakage from thermal expansion and contraction
- robust double wall tool
- excellent durability
- long service life

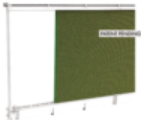

The biggest risk factor in standard water distribution systems is the glue application, which can lead to water leakage and complicated repairs if something goes wrong. Glue is also prone to tearing and splitting with time, and due to the thermal expansion and contraction of the gutter system.

Munters Plastic Gutter (MPG) replaces the glue with innovative joints to avoid leakage from the thermal effects.

Installation, inspection, and ordinary maintenance are all drastically reduced as the MPG modular system can be easily disassembled and doesn't require drying time.

The double wall tool supplies the water needed for the full system, saving time and money as it does not require an extra tool.

MPG is the ultimate solution for climate zones where cooling is required (15/140°F - 15/100°F) and for all freshwater and groundwater applications.
