

Munters EDS 36-30-24 HE

Air circulation fans

The EDS Series is one of the most well-known air circulation fans developed and produced by Munters, able to provide a powerful and uniform airflow in any treated growing media, from indoor, closed and greenhouse applications.

Features

- Superior durability with Munters Protec-coating, 3 years warranty against corrosion
- Easy installation
- High airflow capacity
- Energy efficient solution
- Optimized temperature and humidity distribution

Munters EDS HE Series, which includes three versions, 24", 30" and 36", improves indoor climate control by moving large amounts of air and guaranteeing a high quality and uniformity, while reducing energy consumption.

Munters EDS HE Series features the housing and 3-blade propeller made in Munters Protec-coated steel for extra strength and resistance against corrosion.

The direct drive system ensures high airflow capacity, continuously providing an energy-efficient solution and reducing maintenance needs.

Munters EDS HE air circulation feature some special threaded bushes on their side panels that allow the fan to easily hang the fans on the wall.

As a market leader in ventilation solutions for more than 60 years, Munters guarantees quality and a ISO 9001 certified.
